SUMMARY OF QUALIFICATIONS

- Foundationally strong in software development, deployment, algorithms, data structures, and system design
- Skilled in team projects with success in collaborative processes and integration of individual contributions: team based development, version control workflows, and collaborative problem solving.
- Knowledgeable in client communication and business operations, strategic planning, and aligning deliverables with user needs

EDUCATION

Mercer University, College of Liberal Arts and Sciences

Bachelor of Arts, Computer Science

Minor, Information Systems & Technology

Emphasis, Software Design & Internet of Things

Macon, GA

December 2025

RELEVANT COURSEWORK

Software Engineering, Database Management, Compilers, File Structures and Algorithms, Discrete Mathematics, Operating Systems, Data Structures, Computer Networks, Calculus II, Computer Science

TECHNICAL SKILLS

Programming Languages: C#, C++, Java, Python, Lisp, Fortran, Julia, Ruby, Go, Perl, Rust, HTML, JavaScript, Bash

Operating Systems: Windows

Database: MS Access, SQL Server

Software: MS/Teams/Excel/Word, Zoom, Visual Studio, Eclipse, MobaXterm, GitHub, GitLab, AutoCAD, Firebase

PROJECT EXPERIENCE

AI Writing Platform — React, TypeScript, TailwindCSS, TanStack Start, Cloudflare, GitHub

- Engineered and deployed a full-stack AI-assisted writing platform for communication and journalism students featuring real-time draft analysis, rewrite workflows, and editorial-style interfaces
- Built responsive multi-page frontend architecture with dynamic routing, animated UI transitions, workshop/history systems, and mobile-first layout optimization
- Designed newsroom-inspired user experiences using React, TypeScript, and TailwindCSS with emphasis on readability, motion design, and scalable component architecture
- Integrated cloud deployment workflows, AI service infrastructure, and modern frontend engineering practices while debugging production build, routing, and deployment configurations

Chess Engine — C++, Object-Oriented Programming, Algorithms, GitHub

- Developed a C++ chess engine implementing board-state management, piece movement validation, and turn-based gameplay logic
- Created algorithms for check, checkmate, stalemate, and pawn promotion while enforcing core chess rules
- Applied object-oriented design principles and GitHub version-control workflows to develop, test, and maintain a modular game architecture

Sudoku Solver — Java, Data Structures, Algorithms, Recursion, GitHub

- Built a Java-based Sudoku solver utilizing recursive backtracking and depth-first search techniques to solve complex puzzle configurations
- Engineered constraint-validation algorithms for row, column, and subgrid verification to maintain valid board states throughout execution
- Applied object-oriented programming principles and version-control workflows to develop, test, and maintain the application

Personal Portfolio Website — Next.js, React, TypeScript, TailwindCSS, JavaScript, GitHub, Vercel

- Developed and deployed a responsive personal portfolio website showcasing software engineering projects, technical skills, and interactive frontend development work
- Implemented reusable component structures, responsive layouts, animated UI sections, and optimized deployment workflows using modern React and TailwindCSS practices
- Designed cinematic editorial-style landing page experiences with animated content panels, responsive navigation systems, and polished mobile-first frontend interactions
- Debugged production deployment, routing, and build configuration issues while integrating cloud hosting and frontend optimization strategies

Poker Game Engine — Ruby, GitLab

- Developed a multi-player poker hand evaluation program implementing ranking algorithms and winner-determination logic
- Created modular functions and test cases to validate all hand combinations, improving reliability
- Collaborated through GitLab merge requests and issue tracking to integrate team contributions

Duplicate File Finder — Python, SHA-256, File System Operations

- Developed a duplicate file detection utility that recursively scans directories and identifies identical files using SHA-256 hashing
- Implemented a two-pass optimization algorithm that groups files by size before hashing, significantly reducing unnecessary file processing and improving scan performance
- Calculated recoverable disk space from duplicate files and generated detailed reports showing duplicate groups, file locations, and storage savings

Full-Stack Web Application — React, Node.js, Firebase

- Built and deployed a responsive website using React for UI and Node.js for backend routing
- Integrated Firebase authentication and real-time database storage for dynamic content
- Improved UI/UX through reusable components and optimized load times
- Utilized GitHub for version control, branching, and deployment workflows

Raspberry Pi LED Controller — Python, IoT

- Programmed Raspberry Pi GPIO pins to control synchronized LED lighting patterns
- Designed and soldered wiring harnesses to ensure safe and reliable electrical connections
- Debugged timing issues and optimized code for consistent light sequencing

Programming Contest Operations

- Created algorithmic programming problems and assisted in contest setup, testing, and execution
- Ensured problem clarity, test case accuracy, and smooth event operations

Technical Tutoring & Client Support

- Tutored students in programming fundamentals and provided troubleshooting support for software and hardware issues
- Strengthened communication and customer-focused problem-solving skills

ADDITIONAL EXPERIENCE

Mercer University

Macon, GA

Football Player / Team Leader

August 2024 – December 2025

- *Contributed to two consecutive championship seasons through disciplined training and strategic execution*
- *Served as team accountability leader, coordinating with staff and teammates to improve performance*
- *Represented Mercer football in interviews and community events; earned scholarship through leadership*

Additional Activities

- *Participated in community service and campus engagement*
- *Supported team initiatives and leadership development*

FedEx

Kennesaw, GA

Package Handler

May 2022 – July 2022

- *Maintained high productivity in a fast-paced environment, earning recognition and promotion*
- *Demonstrated reliability, efficiency, and strong work ethic under pressure*

Savannah State University

Savannah, GA

Football Player

August 2021 – 2023

- *Earned scholarship through performance, discipline, and leadership*
- *Strengthened teamwork and contributed to overall team performance*
- *Participated in community service and Boys & Girls Club volunteering*

Honors & Awards

- *Jolly L. Stephens Scholarship Recipient (2022–2024)*
- *Honors Convention Member (2021–2023)*
- *Honor Roll / President's List (2021–2023)*
- *Minority Science & Engineering Improvement Program Participant (2021)*

Allatoona High School

Acworth, GA

Tutor

August 2017 – 2021

- *Provided academic support across subjects and strengthened student confidence*
- *Mentored younger athletes and contributed to football and track programs*

PERSONAL DIALOG

I am a motivated and goal-oriented Computer Science graduate with strong academic performance, hands-on technical skills across multiple programming languages and software tools, and athletic leadership experience that translates. During school I have proven the ability to balance rigorous academics with collegiate athletics while contributing to team environments. I am an experienced tutor with strengths in problem-solving, collaboration, and technology-driven learning. I am seeking opportunities to apply technical expertise and dedication in a dynamic tech environment.
